PROJECTS

I am currently working on two advanced college projects. In the first project I am developing a mobile application that detects and identifies cancerous skin lesions. In the other project, I'm working on creating a smart mirror to identify skin lesions on the face, e.g. acne, blemishes, etc. I implement artificial intelligence in my projects and expand my knowledge of mobile application development.

PERSONAL PROFILE

I am a 3rd year student of Biomedical Engineering. I have decided that I want to associate my future with the IT industry. I am ambitiously trying to learn new environments and programming languages and I am developing all the time. I love to joke around, I'm open to new things and try to move forward confidently without being afraid of new challenges.

TECHNOLOGIES

- Python, Flask, Java, SQLAlchemy, C#, HTML, CSS, Visual Studio, IntelliJ. C++

SOFT SKILLS

- Teamwork
- Problem solving
- Creativity
- Empathy
- Critical thinking

EDUCATION

Gdańsk University of Technology

Biomedical engineering

2020 - now
